

LANAP[®]

PROTOCOL

World's First & ONLY Scientifically Proven[†]
FDA Clearance for *True Periodontal Regeneration[™]

The LANAP protocol is the world's first and only scientifically proven laser gum disease treatment with FDA clearance for True Periodontal Regeneration.

The LANAP protocol utilizes the unique PerioLase[®] MVP-7[™], an Nd:YAG free running pulsed laser requiring specific knowledge and skills derivative of the LANAP protocol.

To you, the patient, this means:

- No cutting
- No stiches
- Less pain
- Regeneration of bone and tissues lost to gum disease
- Hope for hopeless teeth
- Less swelling
- Less tissue removed
- Faster recovery

The LANAP protocol:

- Eliminates the infection
- Allows removal of only diseased tissue without removing any healthy tissue
- Maintains the height of the tissue around teeth
- Minimizes pain and discomfort to the patient
- Closes the periodontal pocket to allow healing – regeneration – to take place

Controlling periodontal disease makes it possible to save and restore otherwise hopeless teeth.

Treatment Procedure

- Periodontal probe indicates excessive pocket depth*
- PerioLase[®] MVP-7[™] laser energy selectively vaporizes bacteria, endotoxins, diseased tissues and denatures pathologic proteins*
- Ultrasonic scaler tips remove root surface tartar*
- Bone is modified to release stem cells*
- PerioLase MVP-7 finishes cleaning pocket, stimulates natural growth factors, and aids in sealing pocket closed so new germs cannot enter*
- Healing of gums to clean root surface occurs*
- Bite trauma is adjusted*
- Tissues and bone regenerate for true healing*
